Watch Usage: Press w to show more. One of your dependencies, babel-preset-react-app, is importing the "@babel/plugin-proposal-private-property-in-object" package without declaring it in its dependencies. This is currently working because "@babel/plugin-proposal-private-property-in-object" is already in your node_modules folder for unrelated reasons, but it may break at any time.

babel-preset-react-app is part of the create-react-app project, which is not maintained anymore. It is thus unlikely that this bug will ever be fixed. Add "@babel/plugin-proposal-private-property-in-object" to your devDependencies to work around this error. This will make this message go away.

Assignment - Add test stage to the pipeline

Quiz 2 | 3 questions

It is now time for you to get some hands-on practice. You need to add a new stage to the project pipeline.

The quiz questions will take you through the steps needed step by step.

Start quiz

Skip quiz

Question 1:

Create a new stage named "Test". This stage should be executed after the "Build" stage and print the following message: "Test stage".

Commit the changes and run the updated pipeline configuration. Ensure no errors occur and that the message is visible in the execution logs.

Did you complete this step?

☒ Yes.

Correct ✓

✚ Explain this further

☐ No.

Question 2:

Within the Test stage of the pipeline, use a Linux utility command to verify that the file `index.html` located within the `build` directory exists.

Did you complete this step?

☒ Yes.

Correct ✓

✚ Explain this further

☐ No.

Question 3:

Within the "Test" stage run the unit tests using the command:

```
npm test
```

Ensure the test execution is successful.

Did you complete this step?

☒ Yes.

Correct ✓

✚ Explain this further

☐ No.

Great job! You are ready to move on to the next lecture.

You got 3 out of 3 correct.

✓ **What you know** ⓘ

Within the "Test" stage run the unit tests using the command:

```
npm test
```

Ensure the test execution is successful.

Did you complete this step?

Within the Test stage of the pipeline, use a Linux utility command to verify that the file `index.js` exists.

Did you complete this step?

Create a new stage named "Test". This stage should be executed after the "Build" stage.

Commit the changes and run the updated pipeline configuration. Ensure no errors occur.

Did you complete this step?
