> react-scripts build

Creating an optimized production build...
[0;33mOne of your dependencies, babel-preset-react-app, is importing the
"@babel/plugin-proposal-private-property-in-object" package without
declaring it in its dependencies. This is currently working because
"@babel/plugin-proposal-private-property-in-object" is already in your
node_modules folder for unrelated reasons, but it [1mmay break at any time[0;33m.

babel-preset-react-app is part of the create-react-app project, [1mwhich
is not maintained anymore[0;33m. It is [1munlikely that this bug will
ever be fixed. Add "@babel/plugin-proposal-private-property-in-object" to
your devDependencies to work around this error. This will make this message
go away.[0m

```

```
serve -s build
```
