 - **Get started**

CLI /

Get started with Netlify CLI

Netlify's command line interface (CLI) lets you configure [continuous deployment](#) straight from the command line. You can use Netlify CLI to [run a local development server](#) that you can share with others, [run a local build and plugins](#), and [deploy your site](#).

The sections below describe how to perform common tasks with Netlify CLI. You can also access a [full command reference](#)  online, or get help [within Netlify CLI](#).

Installation

To install Netlify CLI, make sure you have [Node.js](#)  version 18.14.0 or later.

Then, run this command from any directory in your terminal:

```
npm install netlify-cli -g
```

sh 

This installs Netlify CLI globally, so you can run `netlify` commands from any directory. You can check the version and find out some basic information about the tool with the following command:

```
netlify
```

sh

CLI /

Get started with Netlify CLI

Netlify's command line interface (CLI) lets you configure [continuous deployment](#) straight from the command line. You can use Netlify CLI to [run a local development server](#) that you can share with others, [run a local build and plugins](#), and [deploy your site](#).

The sections below describe how to perform common tasks with Netlify CLI. You can also access a [full command reference](#) ↗ online, or get help [within Netlify CLI](#).

Installation

To install Netlify CLI, make sure you have [Node.js](#) ↗ version 18.14.0 or later.

Then, run this command from any directory in your terminal:

```
npm install netlify-cli -g
```

sh 📄

This installs Netlify CLI globally, so you can run `netlify` commands from any directory. You can check the version and find out some basic information about the tool with the following command:
